About POD

Accelerate your journey to Net-Zero with a powerful tool that provides real-visibility of energy use and emissions across your business estate.

Meet POD – the award-winning energy management software that gives you full reporting of energy consumption across your business, powerful energy data management tools to assist you in cutting costs, increasing efficiency and highlighting opportunities to achieve your sustainability goals.

aro.tech/sustainability

POD has been a developing story since 2015.

Our original quest to build a platform that provided all your energy documentation in one place. We have since linked POD directly to energy meters to enable in depth consumption reporting, highlighting inefficiencies that have saved our customers hundreds of thousands of pounds.

Over 3500 meters managed

£5m+ recovered billing mistakes

Saves 95% of the time spent on managing utilities

INNOVATION OF THE YEAR
TECHNOLOGY- SOFTWARE/ DATA/ DIGITAL

We are now taking the POD story a step further by incorporating Net-Zero reporting that gives you complete visibility into energy consumption and carbon emissions data – in real-time, granular detail – however large or complex your estate. Powerful analytics can enable you to track energy consumption patterns, identify abnormalities and waste and model out proposed changes to identify cost-effective emissions reduction opportunities and optimise your sustainability efforts.

Net Zero Software. Only Better.

Your journey to Net-Zero made easy with POD

With multiplying financial and regulatory incentives to transition to Net-Zero, the most pressing question today is not 'if' or 'when' but 'how'. POD offers a valuable first step, allowing you to track and manage energy consumption and emissions across your business to inform a strategic, data-driven Net-Zero roadmap.

Powered by Live Data

POD accesses feeds from any online energy meter in the UK for consumption and carbon data

It will connect to your data collector or other sensors to give 'real time' consumption and carbon data

Powered by an airline route database that provides carbon data for every flight made

For road travel, POD's vehicle database can provide carbon levels for every vehicle on the UK roads

Even hotel stays have associated carbon. POD's hotel database provides that data too

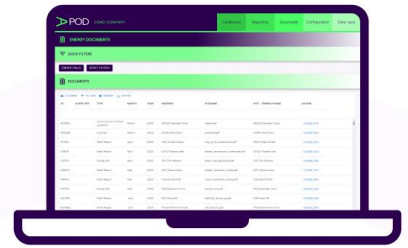

Other Data Sensors

Insights on environmental factors or weather conditions that enhance POD's ability to optimise energy usage and implement proactive energy management measures

Energy Contracts

Energy Bills

Track costs, analyse consumption patterns, identify inefficiencies, and make informed decisions to optimise usage

Energy Meter Data Feeds

Access to real time accurate insights, enabling informed decision making, optimising usage that bring you cost-saving opportunities

Flights Database

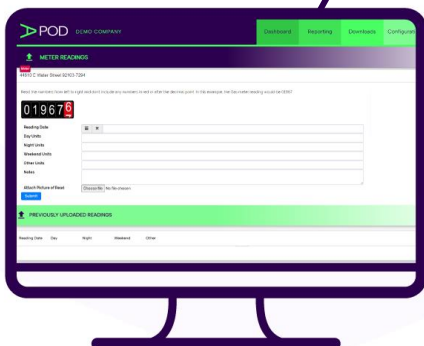

Vehicles Database

Energy Management Documentation

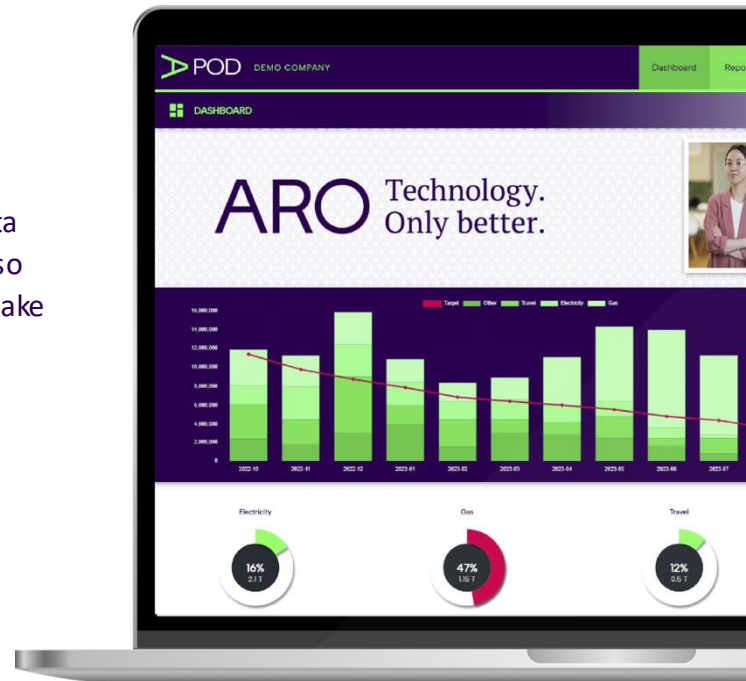

Hotels Database

'Real time' Carbon Emission Reporting

POD collects carbon data from energy meters and data sensors across all commercial sites and stores. It is also linked to airline, hotel and vehicle databases which make it easier for you to record the other carbon scopes.

- Carbon Reporting available at site, region or total levels
- Targets can be set out to future years with constant monthly tracking of progress
- Reports highlight the largest carbon challenges within your organisation
- Downloads are available for full data set or reporting packs

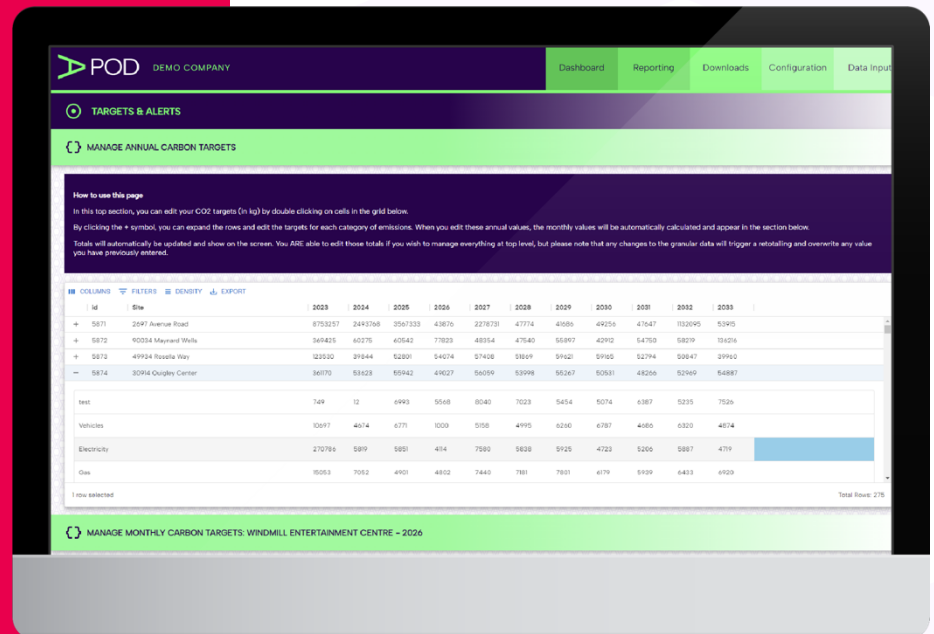

Scope 1,2 and 3 tracking

- POD is configurable to be a central depository for all your other carbon recording
- Data is displayed showing the largest contributors towards your carbon emissions and can also be downloaded categorised into Scope 1, 2 and 3 emissions

03

Net-Zero target setting and tracking

- Targets can be set over any period that is matching your sustainability goals
- Options to set targets at site or element level
- Reports show progress vs targets over time and are automatically updated monthly

04

Net-Zero by Site

- For targets to be actionable they need granularity and ownership
- POD allows targets to be set down to site level
- Opportunity to set timescales and details relevant for your Net-Zero plan to be successful

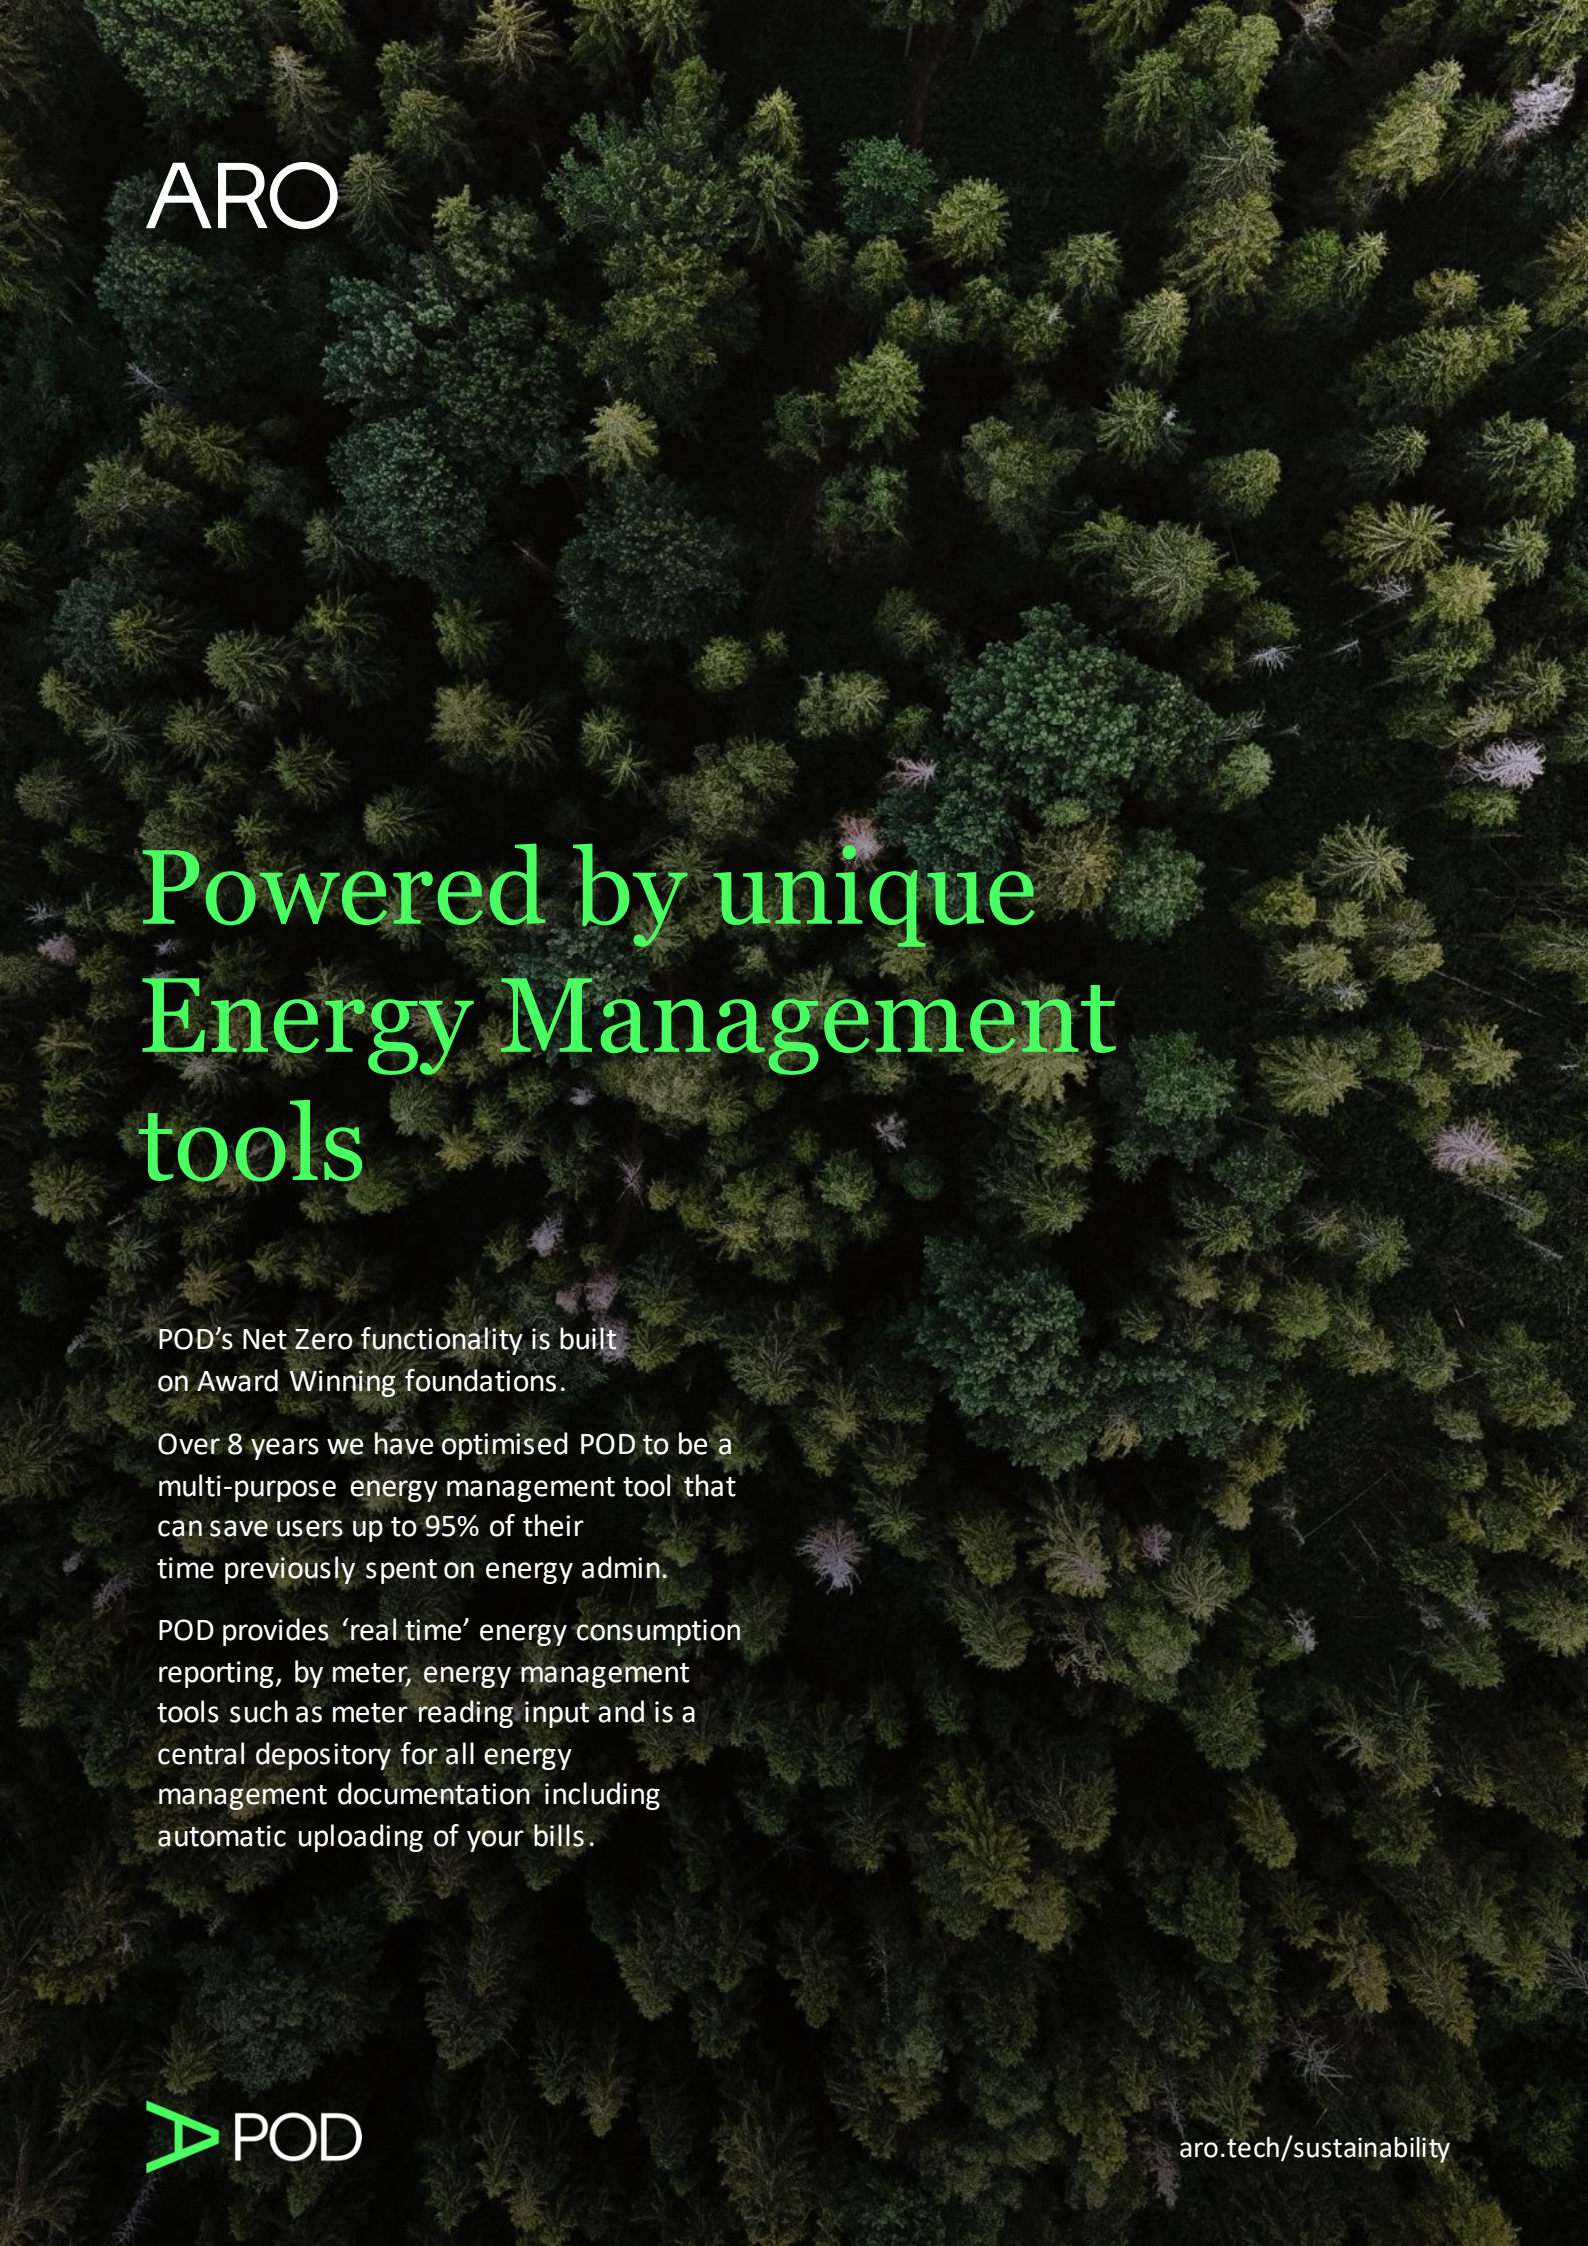

05

Carbon Emissions Download

POD stores all carbon data in easily accessible databases, so you have the data you need for government submissions or management reporting at your fingertips.

Resources available for

- Full carbon data set, downloadable to Excel
- Full Management Reporting pack as a pdf

ARO

Powered by unique Energy Management tools

POD's Net Zero functionality is built on Award Winning foundations.

Over 8 years we have optimised POD to be a multi-purpose energy management tool that can save users up to 95% of their time previously spent on energy admin.

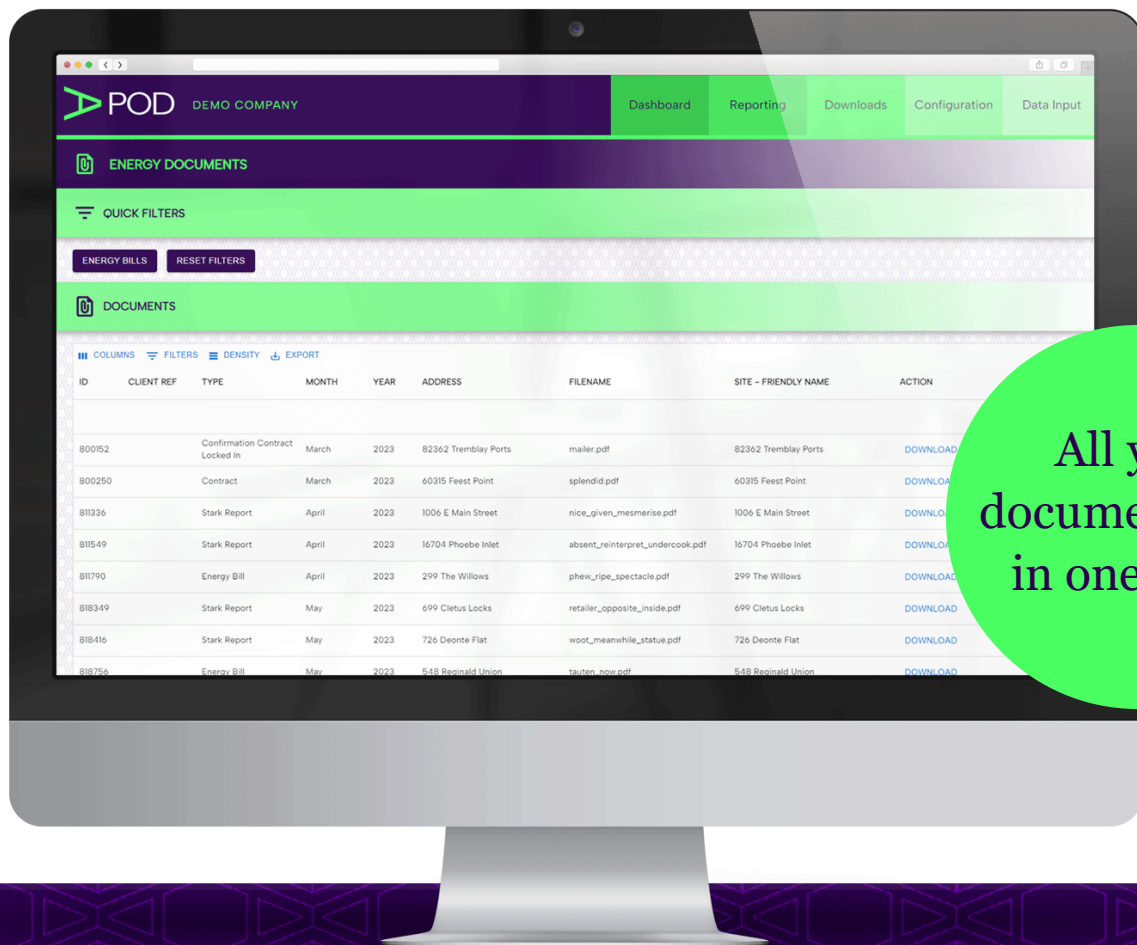

POD provides 'real time' energy consumption reporting, by meter, energy management tools such as meter reading input and is a central depository for all energy management documentation including automatic uploading of your bills.

06

‘Live’ Consumption Reports

- Data you can trust direct from your own meters and data sensors
- Change how your organisation uses energy with our engaging, multi-platform reporting tools
- View and analyse all your meter data through detailed consumption reports that can drill down to 30-minute segments
- Detect and eliminate energy waste and gain a detailed and broad picture of where, how much and when your organisation is using energy - across all utilities

07

Bills, Contracts, Reports

Your complete energy management documentation automatically stored in one place, ready to use whenever you need it.

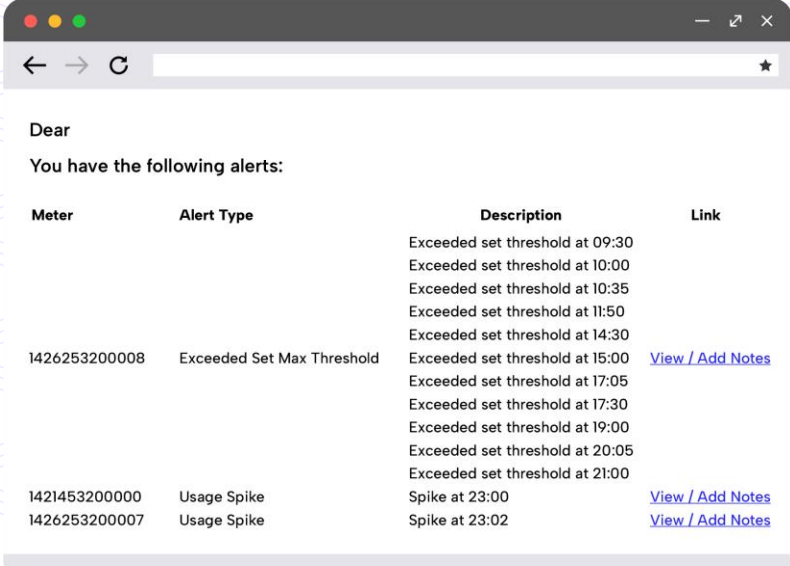

- Energy Bills are automatically uploaded as they are issued
- Contracts
- MOP and AMR Documentation
- Stark Consumption Reports
- Billing Spreadsheets
- Budget and Trading Reports
- KVA Analysis
- DEC
- Duos Charges
- LOA
- Management Reports
- Market Energy Report

08

Usage Alerts

POD can help you to avoid unexpected consumption and bills with easy to set usage alerts.

Should your consumption for a specific meter step outside of boundaries that you set, POD will alert and encourage you to investigate.

Dear

You have the following alerts:

Meter	Alert Type	Description	Link
1426253200008	Exceeded Set Max Threshold	Exceeded set threshold at 09:30	View / Add Notes
		Exceeded set threshold at 10:00	
		Exceeded set threshold at 10:35	
		Exceeded set threshold at 11:50	
		Exceeded set threshold at 14:30	
		Exceeded set threshold at 15:00	
		Exceeded set threshold at 17:05	
		Exceeded set threshold at 17:30	
1421453200000	Usage Spike	Exceeded set threshold at 19:00	View / Add Notes
1426253200007	Usage Spike	Exceeded set threshold at 20:05	View / Add Notes
		Exceeded set threshold at 21:00	
		Spike at 23:00	View / Add Notes
		Spike at 23:02	View / Add Notes

09

Meter Readings

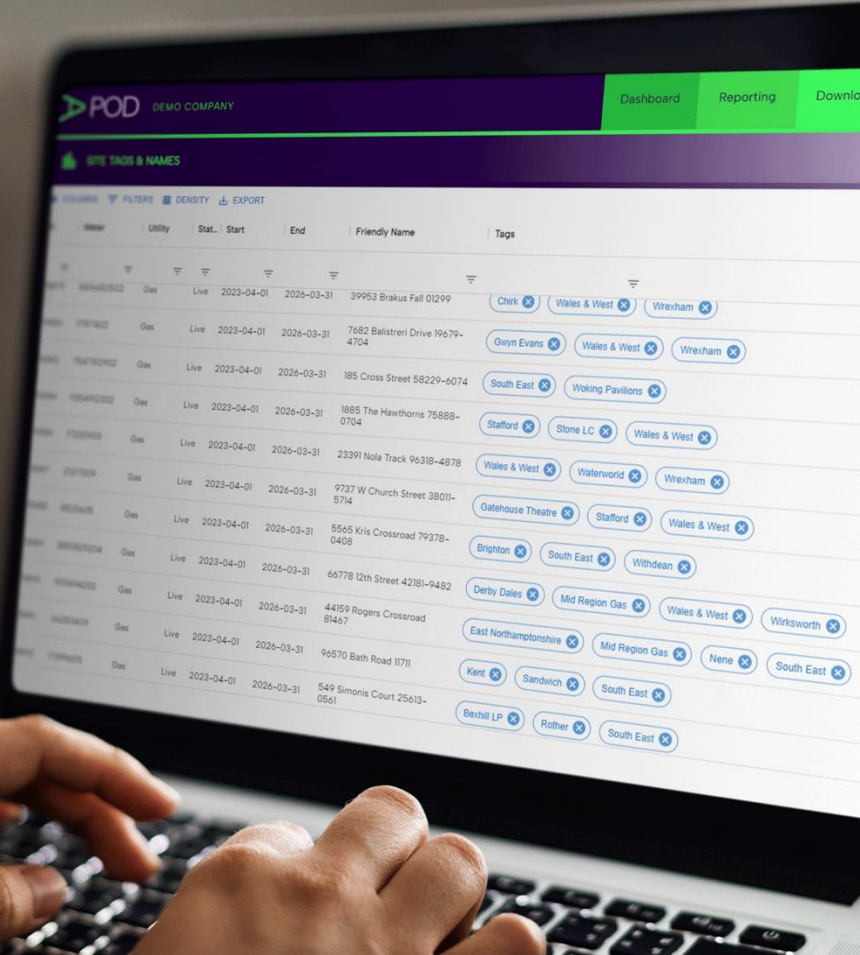

Avoid the need to engage with suppliers or having to book meter reading appointments.

If you have a large estate of meters, it's likely that you will have some that need to be read manually. POD gives you the opportunity to input those readings, which are then automatically routed to the correct supplier.

10

Manage Multiple Sites and Meters

POD recognises the complexity of multi-site operations and allows you to easily group meters and information together into sites for each reporting need.

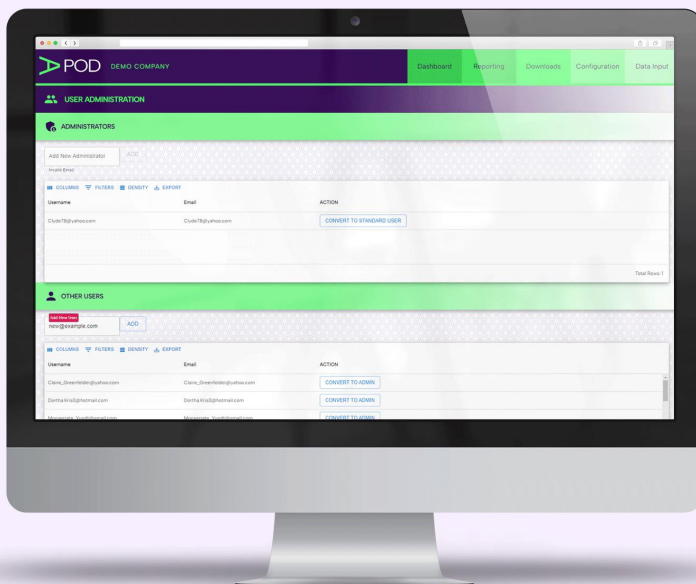

11

User Control and Regional Access

Your admin user for POD will be able to replicate your organisational structure into the platform, so you can give access to specific staff to view reporting on their regional areas of responsibility.

- Option to roll POD out to as many employees as you need
- Target individual site managers and provide them with data specific to their roles and facilities

Whether you are on a determined mission to Net-Zero or you just want to optimise your consumption and simplify your energy management, POD has a feature set for you.

Talk to your ARO Account Manager for a live demo of how POD can help your business.
